Profile

QA Automation Engineer with 4+ years experience in functional testing, accessibility testing and test automation. I approach testing like a problem-solving exercise: understand how the system is supposed to work, find the assumptions it makes, and then figure out how to break them. My career has taken me from lead functional tester to a Subject Matter Expert for accessibility testing, and test automation in Python; where I've helped improve automation frameworks, design reusable testing solutions and develop robust flexible tests that cover positive, negative, and boundary cases. I am excited to continue building my automation and development skills in QA Automation and SDET roles.

Skills

- LANGUAGES & DEVELOPMENT

Python JavaScript SQL HTML/CSS OOP TypeScript React.js CI/CD Pipeline

- TEST AUTOMATION & QA

Squish Katalon Jira ISTQB Functional Testing Regression Testing End-To-End Testing Playwright

- ACCESSIBILITY

WCAG NVDA Accessibility Insights WAVE Keyboard/Screen Reader Testing

- DATA & OTHER TECHNOLOGIES

NumPy SciPy scikit-learn SAP S/4HANA Confluence Git GitHub Actions

Work Experience

08/2026 – present

Toronto, Canada

Front-end web developer

Freelance

- Designed and developed a responsive React website for a GTA-based cover band using Vite and React Router
- Developed a cross-browser end-to-end test suite using Playwright and TypeScript, covering navigation, responsive behavior, form validation, external links, and boundary cases across Chromium, Firefox, and WebKit.
- Built a GitHub Actions CI/CD pipeline that automatically runs Playwright tests, builds the application, and deploys to GitHub Pages only after successful test execution.
- Configured a custom domain and optimized production image assets for responsive web delivery.
- Developed an interactive 2D portfolio using JavaScript, Kaboom.js, Vite, and JSON map data, implementing player movement, sprite animation, collision detection, interactive dialogue, and responsive camera behavior
- Provided an equivalent static portfolio as an alternative to the game-based interface.

05/2022 – 08/2026

Software Tester

Plato

QA Automation Engineer:

- Maintained and updated a Python test automation framework, leveraging Squish to access application elements and retrieve information.
- Organized automated tests into GIVEN/WHEN/THEN steps and collaborated with the team to balance reusable shared functions with test independence, reducing conflicts when tests are developed in parallel.
- Compared backend library values against GUI text using dynamic tests that adapt to the number of text elements returned by Squish.
- Led client demo meetings showcasing sprint deliverables.
- Debugged automation failures and Git workflow issues by isolating failures locally, resolving merge conflicts, and investigating application changes, library updates, and module dependencies.

Lead Functional Tester:

Work Experience

- Led three interns with minimal initial direction while maintaining my own functional testing responsibilities, identifying accessibility testing as an opportunity to provide meaningful client work.
- Trained and supported interns in accessibility testing and coordinated a website-wide audit that uncovered 150+ accessibility defects and contributed to the client's decision to pursue additional accessibility expertise.
- Executed functional testing for SAP S/4HANA and ran and modified automated regression tests using Katalon.

Accessibility Tester:

- Served as Subject Matter Expert for an internal accessibility testing course focusing on NVDA, Accessibility Insights, and semantic HTML, and evaluated assignments and practical exams.
- Selected for the first accessibility testing team for a new client that became the fastest growing client engagement within a year.

Front-End Developer:

- Designed and developed a website with intentional accessibility defects for PLATO's internal accessibility testing course.
- Diagnosed and fixed accessibility defects on PLATO's WordPress website.

08/2021 – 02/2022

Data Science Intern Paper

- Translated scheduler constraints into activity diagrams and analyzed the time complexity of the scheduling algorithm.
- Independently developed a geometric method to identify the “knee” in exponential-decay-like data.
- Implemented k-fold cross-validation to evaluate the predictive accuracy of raw data.
- Developed a decision tree model that provided insight into the scalability of the scheduling system.

10/2017 – 05/2022

Math/Science Tutor Learning Tree/PDPlus/Independent

- Used the Socratic method to teach Physics, Chemistry, Statistics, and Calculus to students from grades 1–12 through first-year university.
- Adapted explanations and teaching strategies to individual learning styles, breaking complex technical concepts into understandable steps.

Education

09/2014 – 04/2020
Toronto, Canada

Physics | Bachelor's of Science University of Toronto

- Designed and constructed a bubble chamber to detect charged particles from space.
- Built a functional AM Radio from scratch.
- Utilized optical tweezers to trap silicon particles.

Certifications

Certified Tester — Foundation Level (CTFL) ISTQB

JavaScript Algorithms and Data Structures freecodecamp

Data Analysis and Visualization with Python Path Dataquest

SQL Fundamentals Path Dataquest

Python for Data Science: Intermediate Course Dataquest
